

# 344

Organic Chemistry Laboratory  
Spring 2013

Lecture 4 Introduction to  $^{13}\text{C}$ -NMR Spectroscopy  
Nicholas J. Hill and Brian J. Esselman

# $^1\text{H}$ -NMR spectrum of pentane

looks odd.....not  $n+1$

© Sigma-Aldrich Co.  
ALL RIGHTS RESERVED

300 MHz  $^1\text{H}$  NMR  
In  $\text{CDCl}_3$

# $^1\text{H}$ -NMR spectrum of hexane

2<sup>nd</sup> order spectrum – difficult to interpret

© Sigma-Aldrich Co.  
ALL RIGHTS RESERVED

300 MHz  $^1\text{H}$  NMR  
In  $\text{CDCl}_3$

# **$^{13}\text{C}$ -NMR Spectroscopy**

**$^{13}\text{C}$  is NMR active ( $I = 1/2$ ),  $^{12}\text{C}$  is NMR silent ( $I = 0$ )**

**The natural abundance of  $^{13}\text{C}$  is  $\sim 1.1\%$**

**i.e. a molecule that contains 100 C atoms will contain just one  $^{13}\text{C}$  nucleus**

## **Good News**

spectra are simple (no 2nd order effects)  
shielding trends are same as for  $^1\text{H}$ -NMR  
can "count carbons"

**Loudon p. 622-629**

## **Bad News**

no coupling information about adjacent carbons  
 $^{13}\text{C}$  data are more difficult to obtain than  $^1\text{H}$ -data  
(due to low abundance of  $^{13}\text{C}$  isotope)

## $^{13}\text{C}$ -NMR spectrum

3 different types of carbon atom in hexane

1 x  $\text{CH}_3$ , 2 x  $\text{CH}_2$  – expect 3 signals

hexane

© Sigma-Aldrich Co.  
ALL RIGHTS RESERVED

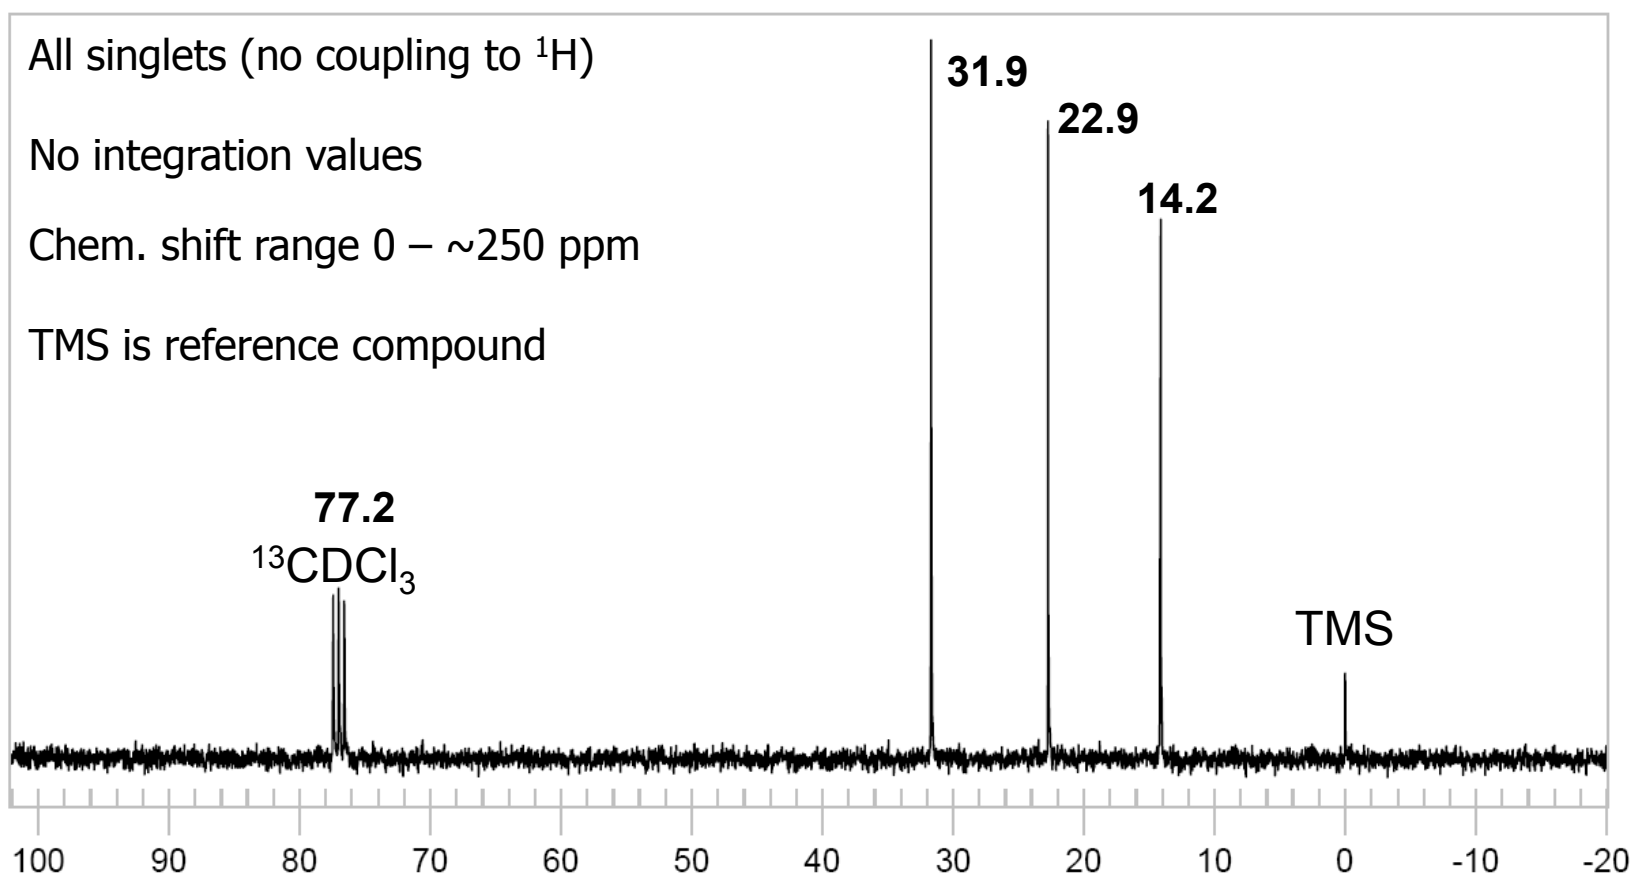

75 MHz  $^{13}\text{C}$  NMR  
In  $\text{CDCl}_3$

All singlets (no coupling to  $^1\text{H}$ )

No integration values

Chem. shift range 0 – ~250 ppm

TMS is reference compound

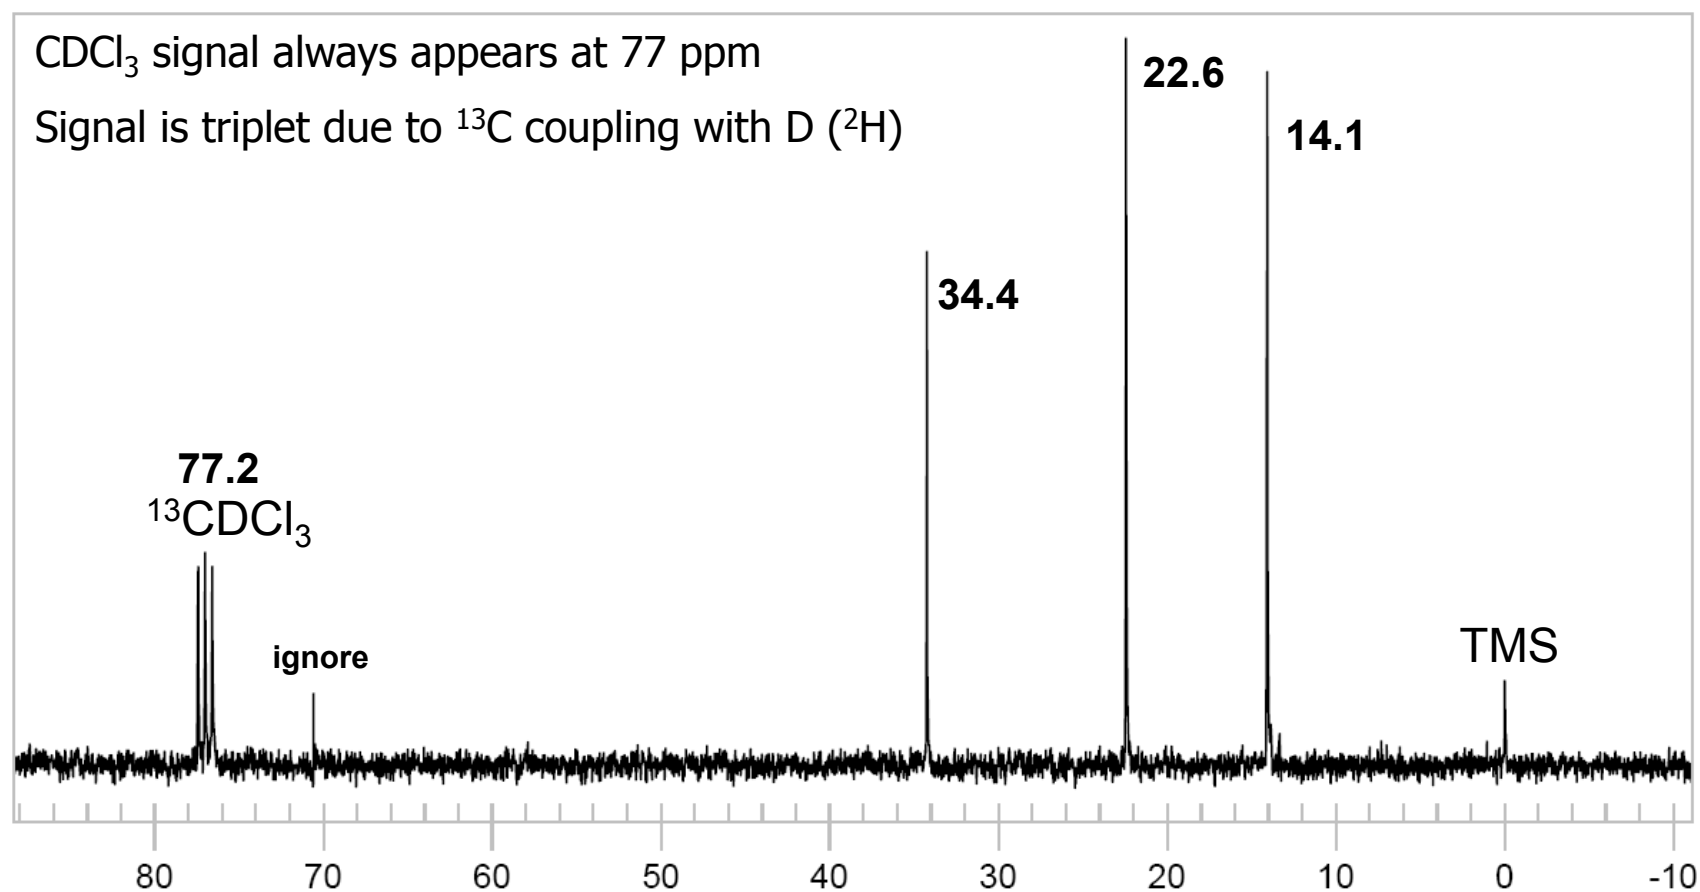

## $^{13}\text{C}$ -NMR spectrum

3 different types of carbon atom in pentane

© Sigma-Aldrich Co.  
ALL RIGHTS RESERVED

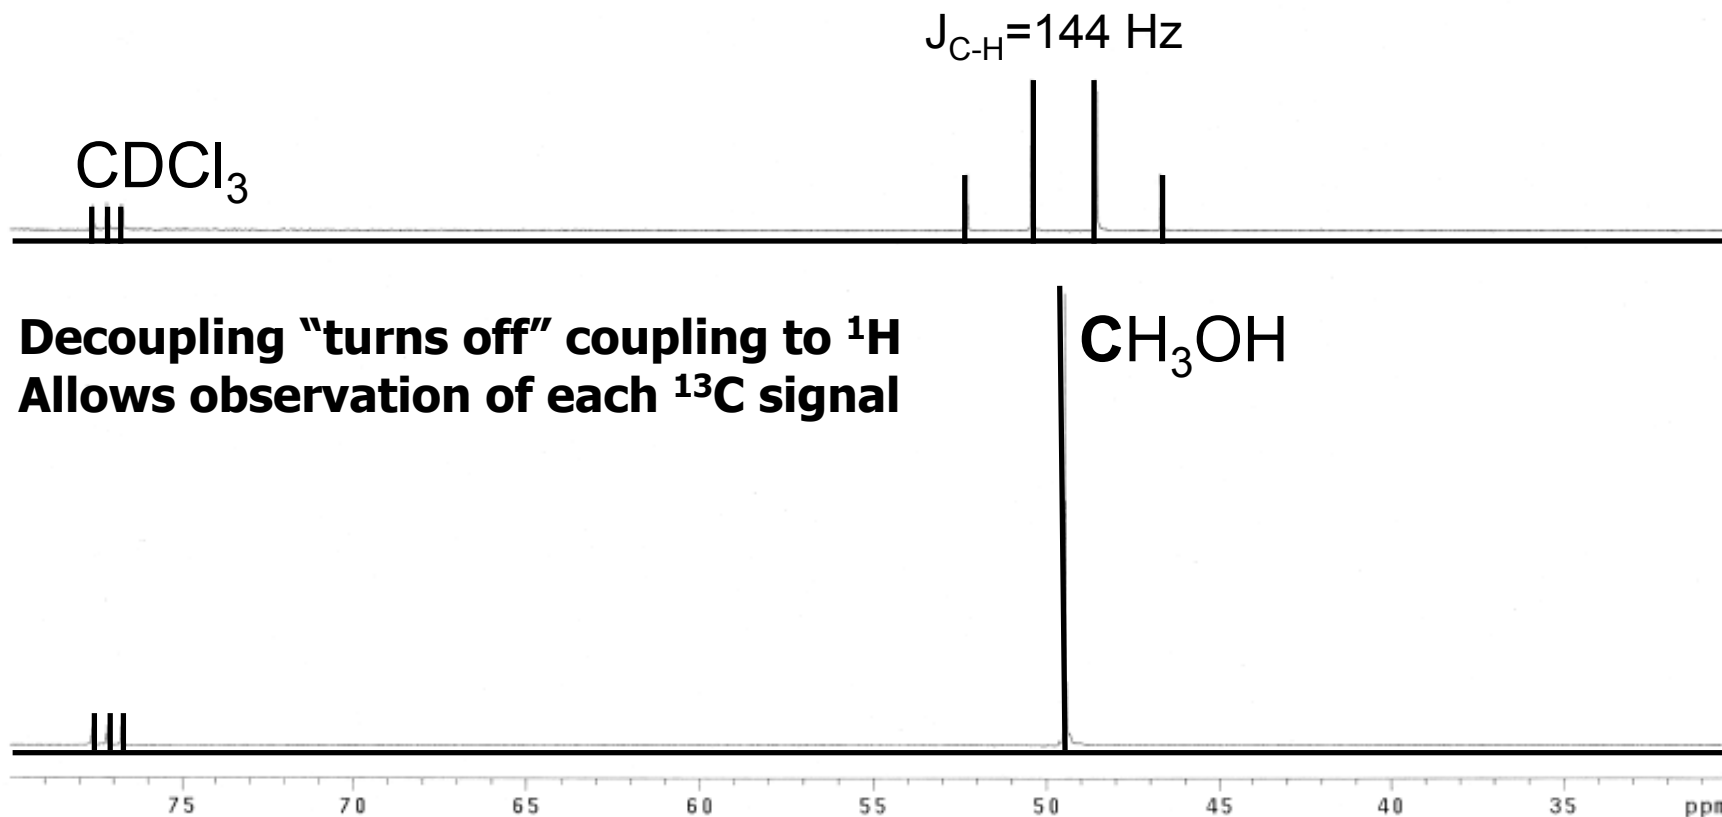

75 MHz  $^{13}\text{C}$  NMR  
In  $\text{CDCl}_3$

# <sup>13</sup>C-NMR spectrum of methanol

512 scans  
30 min  
10 M concentration

<sup>1</sup>H is > 99% abundant, so it couples with the <sup>13</sup>C it is attached to (1 bond 100-180 Hz)

# <sup>13</sup>C-NMR spectrum of ethanol

512 scans  
30 min  
0.5 M concentration

**Decoupled**

## <sup>13</sup>C-NMR Chemical Shift Table

R = sp<sup>3</sup> C or H

C represents carbon of interest

shift ranges are ± ~10 ppm

sp<sup>3</sup> carbons appear ~<100 ppm

sp<sup>2</sup> carbons appear ~>100 ppm

sp carbons appear either side

Nitriles

Alkyl fluorides

Alkyl bromides

Amines

Alkenes

Alkynes

Alkanes

Carbonyl:  
Aldehyde  
Ketone

Carbonyl:  
Ester  
Amide  
Carboxylic Acid

Substituted  
Benzenes

Alcohols  
Ethers

Alkyl chlorides

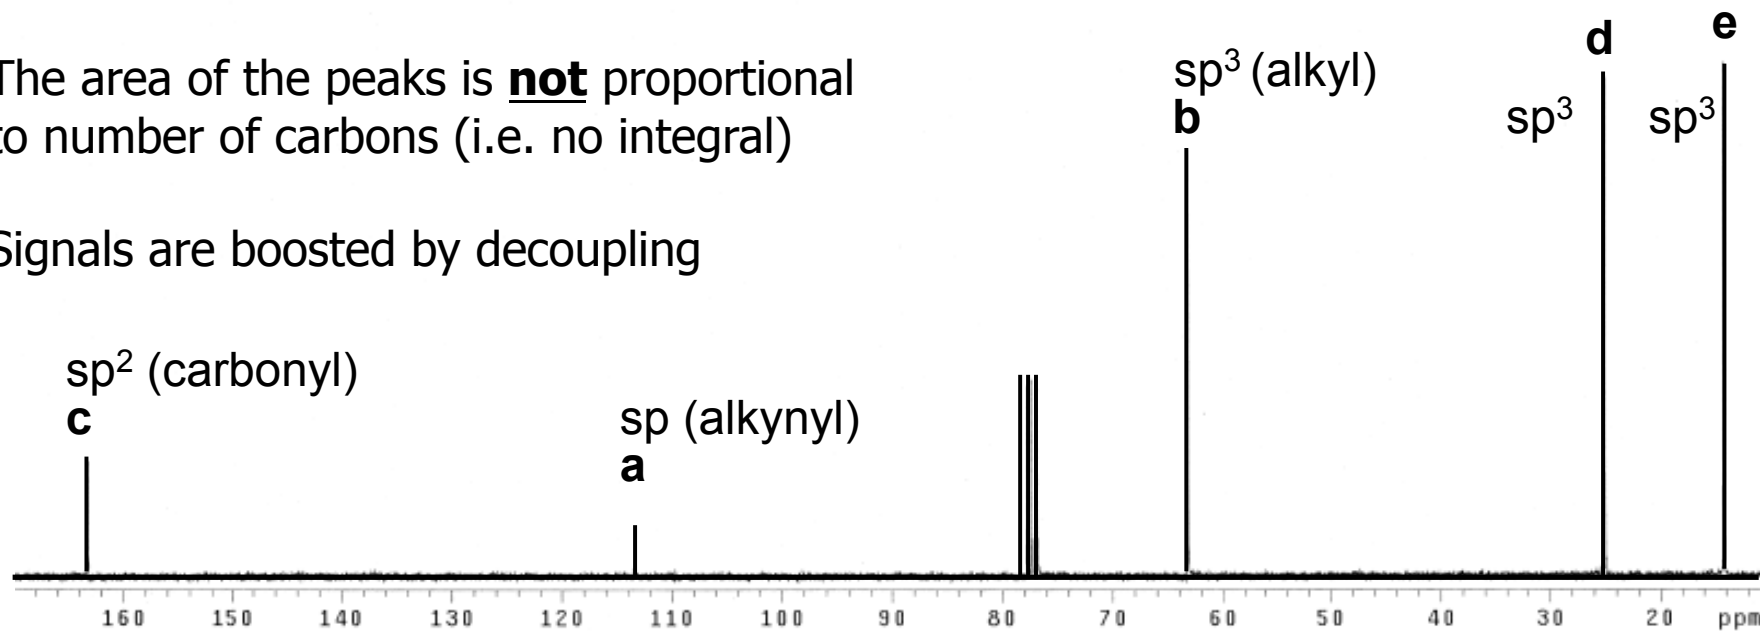

# Effects of decoupling: Ethyl cyanoacetate

512 scans  
30 min  
0.35 M concentration

The area of the peaks is **not** proportional to number of carbons (i.e. no integral)

Signals are boosted by decoupling

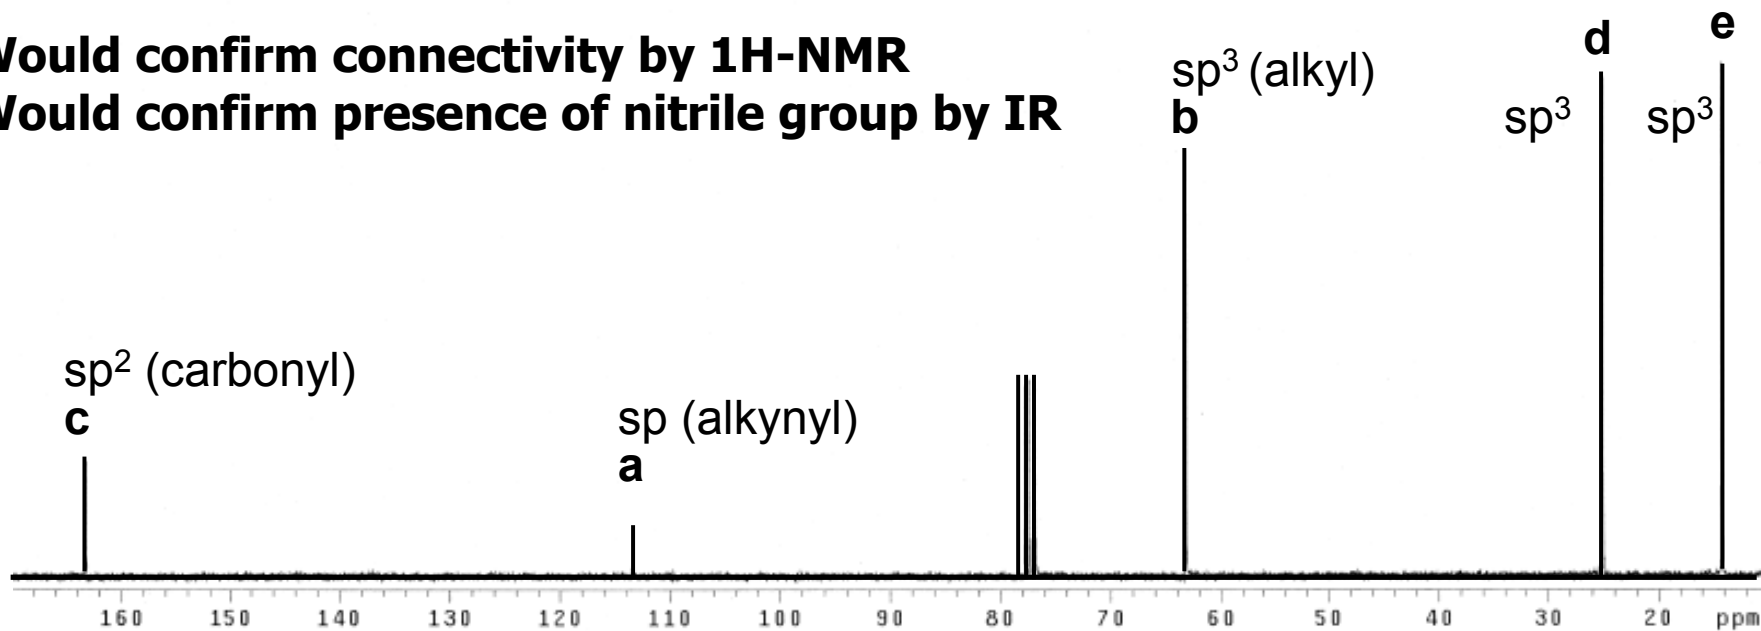

# Effects of decoupling: Ethyl cyanoacetate

512 scans  
30 min  
0.35 M concentration

**Would confirm connectivity by  $^1\text{H-NMR}$**   
**Would confirm presence of nitrile group by IR**

# $^1\text{H-NMR}$ spectrum of Acetamidobenzenesulfonamide

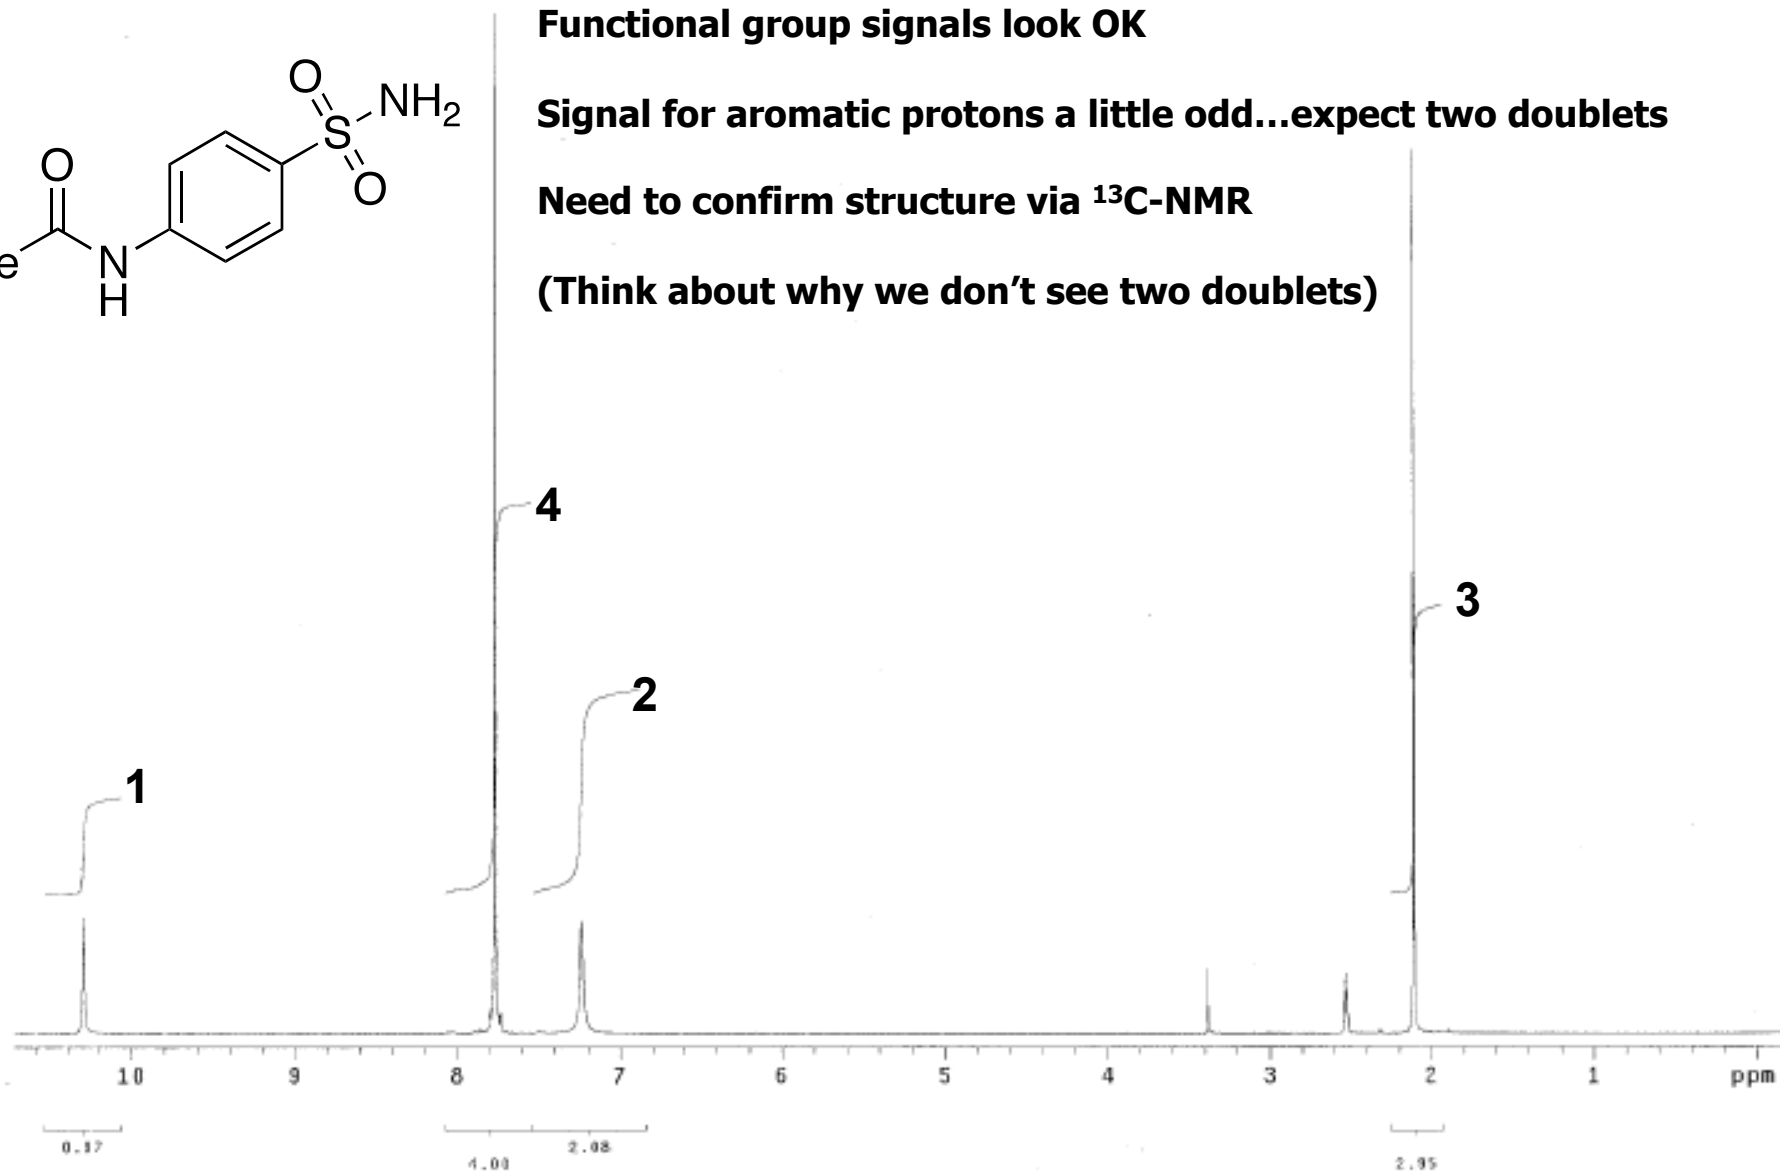

Functional group signals look OK

Signal for aromatic protons a little odd...expect two doublets

Need to confirm structure via  $^{13}\text{C-NMR}$

(Think about why we don't see two doublets)

# <sup>13</sup>C-NMR spectrum of Acetamidobenzenesulfonamide

# Counting Carbons – practice!

?

?

think about equivalence and symmetry

## **Safety in CHEM 344**

**No eating, drinking, smoking, chewing, sipping, etc.**

Nothing ingested in the lab, EVER.

**Wear goggles at ALL TIMES**

Safety specs are not acceptable

**Wear shoes that cover all of the foot**

Toe to heel - avoid exposed skin

**Wear something old**

Don't wear anything you care about

**Wear plastic disposable gloves when handling ALL chemicals**

Discard the gloves off whenever you leave lab!

Put on a fresh pair when you re-enter

**Be aware of lab surroundings**

Know where the fire extinguishers, eye wash station, shower are located

If in doubt, ask TA

## **Advice for success in CHEM 344**

### **Plan ahead**

Don't wait until 10 min before lab begins to read the procedure or write your pre-lab.

### **Understand what you need to do in lab**

Is it a 2-day lab? Do you need to reflux the reaction? Come prepared.

### **Think about what you are doing in lab while you are doing it!**

Why do you need to reflux/cool/add acid/add base/extract/distill?

### **Know exactly what you need to do for the lab report**

Typically NMR and/or GC-MS, post-lab questions (including computational modeling).

### **Plan ahead (again)**

Know when each lab report is due (entire schedule is printed in the lab manual)

Look at the spectra and questions at least 24 hrs before report is due
