

Analytical Seminar

Prof. Abraham Badu-Tawiah

The Ohio State University
Department of Chemistry

*“Panoptic Mass Spectrometry:
How and Why”*

The complexity of contemporary research requires interdisciplinary efforts, and mass spectrometry (MS) is poised to play an important role. The presentation is intended to demonstrate two recent MS experiments designed to facilitate (1) the detection of every ionic species originating from the ion source and (2) an on-demand diagnostic strategy for the underserved population.
