

“One Person’s View of Fundamental Research from Inside NSF”

The National Science Foundation (NSF) is unique as the federal funding agency supporting fundamental research across all of science and engineering. My four years leading the Directorate for Mathematical and Physical Sciences have given me an inside view of the Foundation and have crystallized my view of fundamental research. I will discuss the importance of fundamental research to our Nation, briefly describe the ways in which NSF supports it, and speculate on future prospects.

Colloquium

Professor F. Fleming Crim

University of Wisconsin-Madison

Department of Chemistry

Friday
March 16th
3:30 pm

1315 Seminar Hall
Chemistry

Hosted by Chemistry Colloquium Committee
Refreshments in Atrium following presentation
