

[Use scratch paper at back of exam to work out answers; final answers must be recorded at the proper place on the exam itself for credit.]

1. (20 points) Show the major product or products expected from each reaction.

(single enantiomer)

2. (18 points) Show the reagents and other organic molecules required to convert the starting material to the indicated product. Be sure to differentiate clearly between distinct steps, by using "1)," "2)," etc. over the arrow.

3. (20 points) Draw a complete mechanism (curved arrows) for each of the reactions shown below; be sure to show all important resonance forms.

-- cont. on next page --

3. (cont.)

4. (18 points) Show the structure of A, B and C in the appropriate boxes. The structures you propose should be consistent with the spectroscopic data provided.

Hint: The IR spectrum of A shows a strong signal at 3500 cm^{-1} , but there is no signal above 3200 cm^{-1} for B or C.

A =

B =

C =

5. (24 points) Devise a synthetic beginning with the "starting materials" to generate the "target", using any necessary reagents.
