Hour Exam #2 Chemistry 345 Professor Gellman 26 March 2014

Last Name	
First Name	

General Instructions:

- (i) Use scratch paper at back of exam to work out answers; final answers must be recorded at the proper place on the exam itself for credit. Models are allowed.
- (ii) Print your name on each page.
- (iii) Please keep your paper covered and your eyes on your own work. No electronic devices may be used. Misconduct will lead to failure in the course.
- 1. (20 points) Show the product(s) expected from the reactions indicated below.

(single enantiomer)

Name	

2. (20 points) Show the reagents and other organic molecules required to convert the starting material to the indicated product. Be sure to differentiate clearly between distinct steps, by using "1)", "2)", etc. over or under the arrow.

$$O_2N$$

$$O_2N$$

$$O_2N$$

3. (8 points) Rank the four equilibria below (A, B, C and D) in terms of the extent to which the RIGHT side will be favored, from least to most.

$$CH_3O$$
 H_2O
 CH_3O
 H_2O
 CH_3O
 CH_3O
 H_3O
 CH_3O

$$H$$
 + H_2O H eq. D

INCREASING tendency to lie to the RIGHT:

_____ < ____ < ____ < ____ < ____

Name	
------	--

00168

4. (17 points) Provide a mechanism (curved arrows) for each reaction shown below. Draw all important resonance structures for intermediates.

Name		

00168

4. (cont.)

(starting materials and products are racemic)

Name				
------	--	--	--	--

5. (6 points) Shown below is one of the naturally occurring forms of the carbohydrate designated galactose. CIRCLE each carbon atom, and next to each circle indicate the carbon atom's oxidation state, as defined in lecture.

Name			

6. (14 points) Show the structures of molecules X and Y in the appropriate boxes. The structures you propose should be consistent with the reactions shown and the spectroscopic data provided.

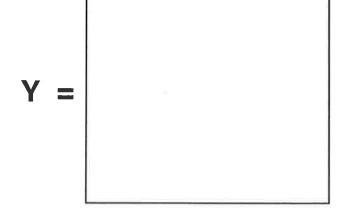

Partial spectroscopic data:

IR: Strong band in range 3250-3350 cm⁻¹

¹³C NMR: Seven resonances

¹H NMR: Six resonances, one of which is

lost upon shaking with D_2O .

Partial spectroscopic data:

IR: Strong band in range 1680-1690 cm⁻¹

¹³C NMR: Seven resonances

¹H NMR: Four resonances; none is

lost upon shaking with D₂O.

Ma	_			
Nam	2			

7. (15 points) Propose an efficient synthetic route from the indicated starting material to the target. You may use any other starting materials and reagents.

N—H stretch	3200-3375 (m)	several absorptions sometimes observed, especially for primary amines

^{*(}s) = strong; (m) = medium; (w) = weak.

APPENDIX III. PROTON NMR CHEMICAL SHIFTS IN ORGANIC COMPOUNDS

This appendix is subdivided into a table of chemical shifts for protons that are *part of* functional groups and a table of chemical shifts for protons that are *adjacent to* functional groups.

A. Protons within Functional Groups

Group	Chemical shift, ppm		
 C	0.7–1.5		
C=C H	4.6–5.7		
—о—н	varies with solvent and with acidity of O—H		
—С≡С—Н	1.7-2.5		
H	6.5–8.5		

Group	Chemical shift, ppm	
О СН	9–11	
О -С-и-н	7.5-9.5	
	0.5–1.5	
NH-	2.5–3.5	

B. Protons Adjacent to Functional Groups

In this table, a range of chemical shifts is given for protons in the general environment

$$\mathbf{H} - \overset{\downarrow}{\mathbf{C}} - \mathbf{G}$$

in which G is a group listed in column 1, and the two other bonds are to carbon or hydrogen. The remaining columns give the approximate chemical shifts for methyl protons (H_3C-G) ,

methylene protons (—CH₂—G), and methine protons (—CH—G), respectively. The shifts in the following table are typical; some variation with structure of a few tenths of a ppm can be expected. The chemical shifts of methine protons are usually further downfield than those of methylene protons, which are further downfield than methyl protons. Each additional carbon substitution increases the chemical shift by 0.3-1.0 ppm.

			Chemical shift of	
Chemical shift of H ₃ C—G, ppm		Chemical shift of —CH ₂ —G, ppm	— CH — G, ppm	
Н	0.2		1.4

(R = alkyl, H) $-N$	2,6	3.1	3.6	
R = alkyl, H)				

73

APPENDIX IV. ¹³C NMR CHEMICAL SHIFTS IN ORGANIC COMPOUNDS

This section is divided into a table of chemical shifts for carbons within functional groups and a table of chemical shifts for alkyl carbons adjacent to functional groups. A typical range of shifts is given for each case.

A. Chemical Shifts of Carbons within Functional Groups

Group		Chemical shift range, p	ppm
—СН ₃		8–23	
—CH ₂		20–30	
	1	21–33	÷
		17-29	×
c=c/		105–150*	
—C≡C—		66-93*	
		125–150*	g ^
0	Ć4	200–220	· .
O R C R	R = H, alkyl	170–180	-
O R	R = H, alkyl	165–175	į.
—C≡N		110–120	

^{*}Alkyl substitution typically increases chemical shift.

B. Chemical Shifts of Carbons Adjacent to Functional Groups

In most cases, alkyl substitution on the carbon increases chemical shift. Methyl carbons will have shifts in the low end of the range; tertiary and quaternary carbons will have shifts in the upper end of the range.

A-8 APPENDICES

Group G	Chemical shift of carbon in G—C—		
R₂C≔CR—	14–40		
HC≡C—	18–28		
<u></u>	29–45		
F	83–91		
CI	44–68		
Br—	32–65		
<u> </u>	5-42		
НО	62–70
