Chemistry Department**

# **Varian NMR User's Guide**

*by: Charles G. Fry*

(updated February 24, 2003)

**Note:** This guide provides an introduction to use of Varian equipment at the UWChemMRF. *This guide is not intended in any way to be a replacement to the excellent Varian documentation!* All students should refer regularly to the Varian VNMR Liquids Users Guide for learning and the Varian VNMR Command Reference Guide for specific guidance. All the Varian documentation is available in both hardcopy and on-line.

| <i>F. 1d Data Workup and Plotting</i>  | 37        |
| II. X Acquisition (e.g., $^{31}P$ or $^{13}C$ ) .....  | 39        |
| <i>Table 6. Common Decoupler Parameter Settings</i>  | 40        |
| D. $^{13}C$ (X) <i>pw90 and {<math>^1H</math>}</i> Decoupler Calibrations                                    | 41        |
| III. DEPT – Distortionless Enhancement by Polarization Transfer .....  | 43        |
| IV. INEPT – Insensitive Nuclei Enhanced by Polarization Transfer .....                                       | 46        |
| V. 1d NOE-Difference Spectroscopy .....  | 48        |
| VI. Homonuclear 1d Decoupling .....  | 50        |
| VII. COSY – 2d Homonuclear Correlation .....   | 51        |
| <i>E. 2d Data Workup and Plotting</i>  | 52        |
| VIII. DQ-COSY – Double-Quantum Filtered COSY (Phase-Sensitive).....  | 53        |
| IX. TOCSY (or HOHAHA) – Total Correlation Spectroscopy.....  | 55        |
| X. Other COSY Variants .....   | 57        |
| XI. NOESY – 2d NOE and Exchange Spectroscopy .....   | 58        |
| XII. ROESY – 2d NOE Spec.; Mixing via a Spinlock in the Rotating Frame.....                                  | 60        |
| XIII. HETCOR – 2d Heterocorrelation Spec. (“normal” X nucleus detection) .....                               | 62        |
| XIV. HMQC and HSQC – 2d Heteronuclear Spectroscopy (“inverse” experiment with $^1H$ detection) .....         | 63        |
| XV. HMBC – 2d Long-Range Heterocorrelation Spec. (inverse detection).....                                    | 65        |
| XVI. Other Heteronuclear Correlation Experiments .....   | 66        |
| XVII. Fitting Partially Overlapping Peaks – Deconvolution in VNMR .....                                      | 67        |
| XIX. $^1H$ Spin-Lattice Relaxation, $T_1$ .....  | 68        |
| II. Rapid Determination of $T_1$ by Inversion-Recovery Null Method.....                                      | 68        |
| III. Quantitative measurement of $T_1$ by Inversion Recovery Method.....                                     | 69        |
| A. Comments .....  | 69        |
| B. Acquisition Set-up .....  | 69        |
| C. $T_1$ Analysis (see Varian Subject manual, Adv. 1d section) .....   | 69        |
| XIX. Cross-Polarization/Magic-Angle-Spinning NMR.....  | 72        |
| A. Preparation of MAS spectra .....  | 73        |
| B. Simulation of spinning sideband patterns .....  | 74        |
| C. Least-squares fitting of spinning sideband patterns .....   | 74        |
| <b>Data Backups from UNIX Workstations .....</b>   | <b>76</b> |
| I. Backups to Colorado Systems Tape Drive on Windows NT Network .....  | 76        |
| A. Perpare tar file on UNIX workstations .....   | 76        |
| B. Move file to NT server .....  | 76        |
| C. Backup file to Colorado Systems tape drive .....  | 76        |
| D. Recovering backup'ed up data .....  | 76        |
| II. Backups to IOmega Zip Drive on Windows NT Network (currently installed on Morder, Terminus, Drazi) ..... | 76        |
| A. Prepare a tar file .....  | 76        |
| B. Backup file to IOmega Zip drive .....   | 77        |
| D. Recovering backup'ed up data .....  | 77        |
| III. Backups to Pinnacle Optical Disk (on Tango on 5 <sup>th</sup> floor) .....                              | 77        |
| A. Format a New Optical Disk .....   | 77        |
| B. Create File System on New Optical Disk .....  | 77        |
| C. Backup to Optical Disk .....  | 77        |
| IV. Backups to Pinnacle CD Writer (on Twiddle on 9 <sup>th</sup> floor) .....                                | 78        |

|                          |          |
|--------------------------|----------|
| <i>Table of Contents</i> | Page iii |

| B. Transfer Directories/Files to Easy-CD Window                     | 78        |
| <b>Administration of Varian Spectrometers.....</b>                  | <b>80</b> |
| I. Rebooting Sun's on Spectrometers (requires root privileges)..... | 80        |
| A. Shutting down UNIX:  | 80        |
| B. Powering Up UNIX:  | 80        |
| <b>Pulsed-Field Gradient Shimming With VNMR.....</b>                | <b>81</b> |
| I. General Discussion .....   | 81        |
| II. Normal PFG Shimming Procedure.....                              | 82        |
| III. First-Time Use and Detailed Explanation of Parameters .....    | 83        |
| A. Critical Parameters  | 84        |
| B. Details of Correct Parameter Setup                               | 85        |

## UW Chemistry Magnetic Resonance Facility (UWChemMRF)

### I. Facility Layout (2<sup>nd</sup> floor Mathews)

#### As of Feb. 2003

|                |                                |                                    |  |
|----------------|--------------------------------|------------------------------------|--|
| <b>ATHENA</b>  | – AC+ 300                      | routine $^1H/^{19}F/^{31}P/^{13}C$ | – sample changer, quad-nucleus probe   |
| <b>HOMER</b>   | – AC+ 300                      | routine $^1H/^{13}C$               | – $^1H/^{13}C$ dedicated   |
| <b>PHOENIX</b> | – AC+ 250                      | routine BB VT                      | – routine BB ( $^{29}Si/^{11}B/^{2}H/^{199}Hg$ /etc.), variable temperature                        |
| <b>VIR</b>     | – UNITY-300 solid-state NMR    |                                    | – conformational, motions, solid-state packing, catalysts, amorphous and glassy compounds          |
| <b>NATOTH</b>  | – Avance-360 non-routine BB VT |                                    | – long-term VT, kinetics, concentration limited samples; 5 and 10 mm BB probes, 5 mm inverse probe |

- NARN** – UNITY-500 non-routine  $^1\text{H}$ /BB VT – high-sensitivity, sample-limited ( $^1\text{H} < 5$  mg,  $^{13}\text{C} < 15$  mg), short-run, sophisticated experiments (e.g., HMQC, DQCOSY, gCOSY, gNOESY); limited access
- VORLON** – INOVA-500 inverse exps, 2D studies – long-term, sophisticated, gradient-enhanced experiments; combi-chem MAS probe; limited access
- XIRTH** – INOVA-600 long-term 2D studies – long-term, most sophisticated, gradient-enhanced experiments (e.g., NOESY/ROESY, HMQC, DQCOSY); limited access
- ESR** – ESP-300 electron spin resonance – paramagnetism, free-radical chemistry
- PC's**
  - Six PC's are located in rm. 2224 for use in working up data. The PCs connect to a Win2000 server, which uploads data once per minute to a SNAP server, nmrssnap.chem.wisc.edu (128.104.70.79). The SNAP server can be mapped to PCs or Macs within the department, or accessed via IE or Netscape. See the facility director for more information
  - All PCs have Acorn Software's NUTS 1D, H. Reich's WinDNMR, FTP and Zip software loaded. Some PCs have NUTS 2D Pro, ACDs HNMR and CNMR, gNMR, and Mestre-C software loaded on them.
- Sun's**
  - 3 to 4 Sun workstations are available for data workup in rms. 2207 and 2219A.
  - NARN, VORLON, and XIRTH are hosts for the U500, I500 and I600 instruments, respectively.
  - VNMR 6.1c, Felix95, NMRView, NMRPipe, and XEasy software are available on the Sun workstations.
- SGIs**
  - NATOTH (Avance host computer) and GQUAN (for off-line data workup)

## II. Facility Personnel

**Director, Chemistry Instrument Center**

Prof. Paul M. Treichel Rm. 6359A 262-8828 treichel@chem.wisc.edu

**Director, Magnetic Resonance Facility**

Dr. Charles G. Fry Rm. 2128 262-3182 o fry@chem.wisc.edu  
(Charlie) 276-0100 h cgfry@facstaff.wisc.edu

**Associate Director, MRF**

Monika Ivancic Rm. 2132 262-7536 o

**NMR Engineer**

Marv Kontney Rm. 2210 262-0563 marv@chem.wisc.edu

**ESR Engineer**

Roger Clausen Rm. 2225 262-8196 clausen@chem.wisc.edu

**Teaching Assistants**
